

INSTALLATION AND OPERATION INSTRUCTIONS FOR: COVELINE

CAUTION: BEFORE CONNECTING THE FIXTURE TO A POWER SUPPLY, MAKE SURE THE POWER IS SWITCHED OFF.

GENERAL:

1. Before starting the installation, disconnect the power by turning off the circuit breaker or by removing the fuse at the fuse box. Turning the power off at the light switch is not sufficient to prevent electrical shock.

2. To ensure the success of the installation, be sure to read these instructions and review the diagrams thoroughly before beginning.

3. All electrical connections must be in accordance with local codes, ordinances, or the National Electrical Code.

NOTE: The important safeguards and instructions appearing in this manual are not meant to cover all possible conditions and situations that may occur.

INSTALLATION:

- 1) Remove both mounting brackets from fixture (FIG-1).
- 2) Secure brackets to mounting surface using (4) four included screws (FIG-2).
- 3) Reattach fixture to the mounting brackets in the desired position (FIG-3). Follow steps 1-3 for mounting multiple fixtures.
- 4) While the power supply remains disconnected, connect multiple fixtures using the short connection cable exiting the fixture (FIG-4).
- 5) **FOR DIMMING:** From the power source connect the black (positive) wire and the green (ground) wire to the corresponding connections on the dimmer (supplied by others). Using the connection cord (must specify when ordering) connect the black (positive) to the corresponding connection in the dimmer and then connect the white (negative) wire from the starter cord to the white (negative) wire from the power source (FIG-5).
- 6) Once all fixtures are mounted, connected and wired correctly return power to the power supply by turning power back on at the fuse box.
- 7) Once power returns to the power supply turn the fixtures on (FIG-6).
